AAHAAR

Zero Waste. Zero Hunger. Fully Verified.

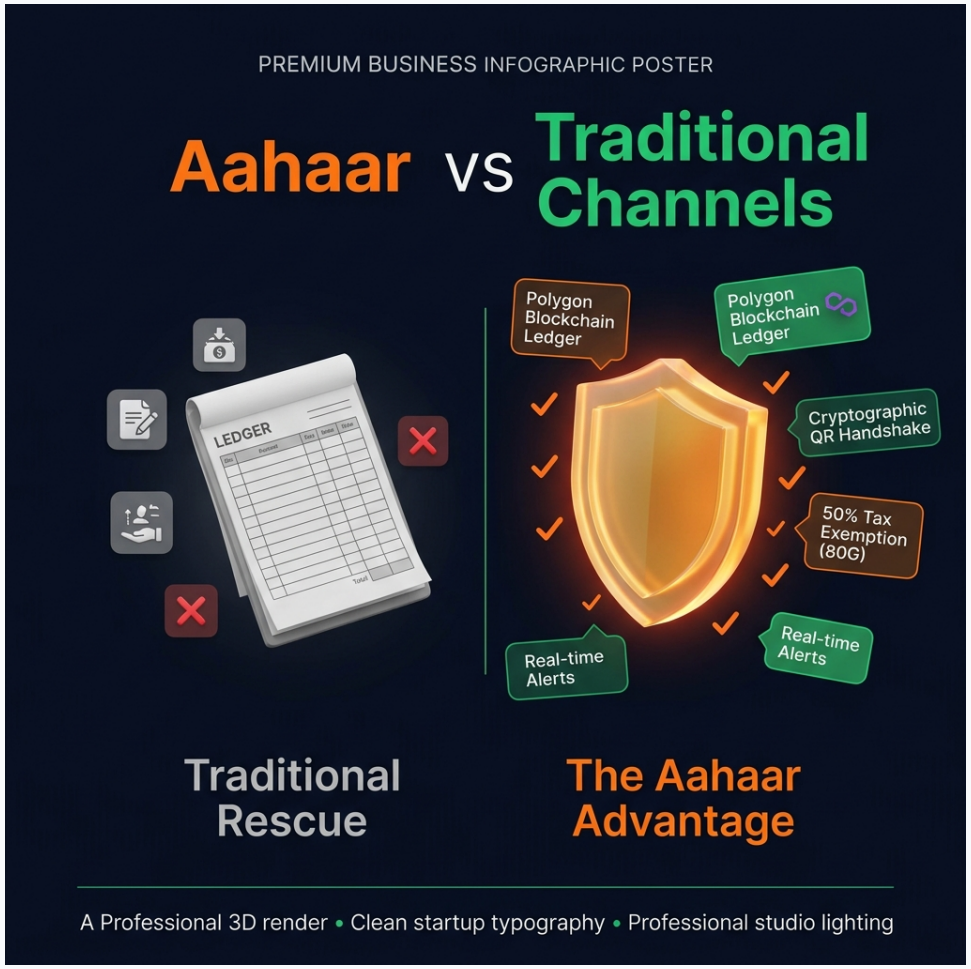

A Unified B2B SaaS Enterprise Ecosystem Orchestrating Surplus Redirection, Cryptographic Verification, and Compliance Automation

Presenter: Santosh Patel I Department of Computer Science & Engineering

ABES Engineering College I Spark Fellowship Selection Challenge

IP Status: Patent-Pending Technology (System & Method for Secure Real-time Surplus Logistics Verification)

The Food Waste & Trust Paradox

Solving the Operational Bottlenecks

- Traditional charity networks rely on manual entries, leading to data manipulation and food loss.
- Lack of proof-of-delivery creates verification disputes between donors and NGOs.
- Direct food donations typically fail to secure Section 80G corporate tax benefits.
- Aahaar resolves these limitations with blockchain trust, QR verification, and structured tax metrics.

Aahaar Platform Ecosystem Mind Map

Core Ecosystem Connections

- Donors: Corporate offices, hotels, and event venues list surplus food on the portal.
- Secure Handshake: Dual-party QR validation rules out pickup and transit delivery disputes.
- Verified NGOs: Credentials checked via administrative gates and managed by EVM DAO.
- Impact Incentives: Pre-populated Section 80G tax benefit files and live ESG carbon indexes.

Zero-Leakage Handshake Verification

Proof of Physical Delivery

- System generates a dynamic QR code and 6-digit OTP code when claims are approved.
- NGO rider displays the QR code at the physical pickup site to verify arrival coordinates.
- Donor scans the QR code to sign off the transaction and commit verification to the blockchain.
- Solidity smart contract marks completion, awarding reputation scores on-chain.

Automated Tax Benefit Valuation

50% Tax Exemption Protocol

- System converts food category and weight weights into fair procurement values.
- Enables corporate donors to legally claim a 50% Section 80G tax deduction.
- Generates compliant, watermarked PDF certificates containing smart smartphone-scannable QR verification.
- Verification receipts are locked until admin verifies donor credentials to prevent fraud.

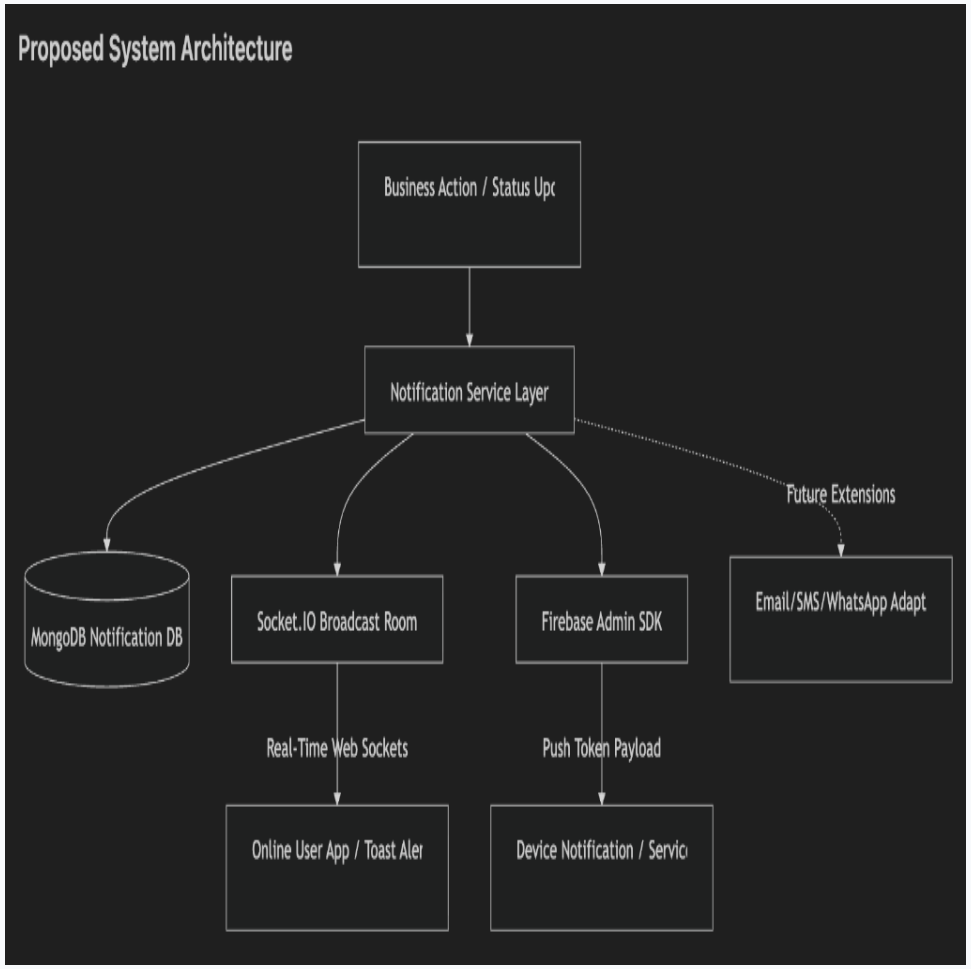

Real-Time Environmental & Carbon Offsets

ESG Footprint Tracking

- Diverting organic waste from landfills avoids anaerobic methane emissions.
- Applies scientific offset models: 2.5 kg CO_2 reduction per kg of surplus food rescued.
- Translates carbon numbers into mature tree equivalents (22 kg CO_2/tree/year).
- Prepares clean, board-ready sustainability metrics for annual CSR reports.

Proposed System Architecture & Sync

Notification & Event Listeners

- Socket.IO connection feeds real-time updates directly to admin and user dashboards.
- Firebase Cloud Messaging (FCM) drives offline alerts to browser tabs.
- Twilio SMS gateway sends immediate OTP codes to logistics drivers.
- Node.js background event listener synchronizes EVM smart contract logs to MongoDB.

AAHAAR: DIGITIZING TRUST, FEEDING LIVES

Together, We Can Eliminate Food Waste, Empower Communities, and Build a Sustainable Future.

AAHAAR — Feeding People. Empowering NGOs. Transforming CSR. Protecting the Planet.

Enterprise Utility: Complete SaaS solution addressing corporate CSR and green ESG targets.

Operational Codebase: Deployed system integrating Express APIs, Socket.IO, and Solidity contracts.

Call to Action: Inviting foundations (like Reliance Foundation) and enterprise leaders to partner.
